CAREER OBJECTIVE

AIML fresher with hands-on experience building AI-powered applications using LLMs, RAG pipelines, LangChain, and multimodal systems. Skilled in Python, HuggingFace Transformers, and OpenAI/Gemini APIs. Eager to contribute to ML engineering, generative AI, or applied AI research teams.

TECHNICAL SKILLS

Languages: Python, Java, C, SQL

ML / AI: Supervised Learning, EDA, Model Evaluation, Prompt Engineering

LLM & GenAI: LangChain, LlamaIndex, RAG Pipelines, OpenAI API, Gemini API, HuggingFace Transformers

Frameworks: FastAPI, Flask, TensorFlow (basic), Scikit-learn, Pandas, NumPy

Tools: Git, MS Excel

WORK EXPERIENCE

PySpiders – Data Science Intern (Training)

Feb 2026 – Present

- Training in SQL, Python, data analysis, and GenAI fundamentals; applying learnings through hands-on preprocessing and model building exercises.

PROJECTS

Voxmate – Multimodal AI Assistant | Python, NLP, Voice, Facial Auth

- Developed a secure multimodal assistant combining voice interaction, face authentication, and NLP-based intent understanding within a single system.

AMPLA – Autonomous Multi-Agent Learning Assistant | LLM, LangChain, Multi-Agent, Python

- Created a multi-agent learning framework for explanation generation, task management, and self-evaluation with coordinated agent workflows (Phase 1).

Cognitive Digital Twin – User Behavior Modeling | RNN, Transformers, Python

- Explored sequence-based approaches using RNNs and Transformers to model user behaviour and support Adaptive AI systems (Phase 1).

Disease Prediction – Random Forest | Python, Scikit-learn, EDA

- Applied Random Forest models to breast cancer and Alzheimer's datasets, including preprocessing, analysis, and performance evaluation.
